

PRESS RELEASE
No. 287 of December 5, 2012

Average earnings^{*)} in October 2012

For correct interpretation of results, please consult the Methodological notes from page 2 of the Press release

In October 2012, the average gross nominal earnings were 2139 lei, by 0.8 % higher than the one registered in September.

The average net nominal earnings were 1552 lei, increasing as against the previous month with 14 lei (0.9%).

The highest values of the average net nominal earnings were recorded in air transport (3953 lei), while the lowest in accommodation and food service activities (846 lei).

Earnings in relation with the evolution of consumer prices

The real earnings index for October 2012 as against previous month, calculated as the ratio between the net nominal earnings index and the consumer prices index, was 100.6%.

As compared to October 1990, the real earnings index was 119.5%, by 0.8 percentage points higher than the one recorded in September 2012.

Fluctuations in earnings were recorded during the year, mainly determined by granting annual premiums and holiday bonuses (December, March/April). These are influencing the increases or decreases depending on the period they are granted, finally leading to smoothing the fluctuations in monthly earnings at the level of the whole year.

^{*)} Please see Methodological notes from item 4. Concepts and definitions.

October 2012 as compared to September 2012

In October 2012 as against September 2012, in almost all activities of the **economic sector**¹ **slight increases of the average net earnings** were noticed due to granting of bonuses, amounts from the net profit and other funds (including meal vouchers), payments in kind or achieving of higher production and receipts level (depending on contracts).

The most significant increases in the average net earnings have been recorded as follows:

- By 21.2% in mining of coal and lignite, respectively by 13.1% in mining of metal ores;
- Between 5.0% and 7.5% in air transport, other mining and quarrying, other manufacturing, activities auxiliary to financial services (including insurance activities), manufacture of other transport equipment;
- Between 2.5% and 5.0% in manufacture of wearing apparel, real estate activities, manufacture of furniture, electricity, gas, steam and air conditioning supply, manufacture of fabricated metal products, except machinery and equipment, manufacture of paper and paper products, sewerage.

Decreases of the average net earnings as compared to the previous month were caused by the occasional bonuses (including quarterly bonuses), amounts from the net profit and amounts from other funds (including meal vouchers) which were granted in September. Also, in some economic activities the decrease of the average net earnings was caused by the production un-achievements or lower receipts (depending on contracts).

The most significant decreases of the average net earnings have been recorded as follows:

- By 25.9% in extraction of crude petroleum and natural gas, with 17.8% in manufacture of coke and refined petroleum products, respectively with 7.2% in manufacture of basic pharmaceutical products and pharmaceutical preparations;
- Between 2.0% and 3.5% in telecommunications, mining support service activities, manufacture of tobacco products, computer programming, consultancy and related activities (including information service activities).

In the **budgetary sector**² as against September, **increases of the average net earnings** were registered in education (6.9%) due to the amounts representing the hourly payments of teaching staff. Also, as against previous month, in public administration (0.4%) and health and social assistance (0.1%) slight increases of the average net earnings were registered.

October 2012 as compared to October 2011

As compared to October of the previous year, the average net nominal earnings increased by 6.5%. The real earnings index in relation with the same period of previous year was 101.5%.

Methodological notes

1. Monthly data on earnings and number of employees are obtained from a sample statistical survey. For sizing the sample getting estimates of the main surveyed characteristics was considered, affected by errors in the limit of +/-3% and guaranteed with a probability of 95%. Since January 2012, the sample includes 22000 economic and social units. Budgetary units are exhaustively surveyed, except for the units of local public administration for which data at level of local communal councils are collected based on a sample representative at county level (about 770 units).

For economic sector, the survey covers the units with four employees and over, representing 90.59% of total employees in this sector.

The objective of monthly statistical survey on earnings is to evaluate short term trends of monthly and hourly average earnings per total economy and by activity sector.

2. Data obtained from monthly statistical survey on earnings and number of employees are **aggregated by homogenous activity of the units**, meaning that public administration **does not include** all the secondary activities developed by central and local public administration, such as:

- social assistance,
- cultural, sport and recreation activities,
- landscape and services for buildings,

¹ Excluding activities of public administration, education, health and social assistance

² see Methodological notes from point 3 regarding „ budgetary sector”.

- agriculture,
- water distribution, sanitation, waste management, decontamination activities,
- construction,
- transport and storage,
- production and supply of electric and thermal energy, gas, hot water and air conditioning,
- renting and sub-renting real estate goods etc.

Information for secondary activities are included in the corresponding economic activities according to CANE Rev.2 .

3. Information regarding „budgetary sector” should be used carefully, because data refer to statistics from economic activities (aggregated by homogenous activity) **according to CANE Rev.2.** of public administration, education and health and social assistance (including private sector for education – about 3%, respectively health and social assistance - about 7%), excluding armed forces and similar (Ministry of National Defence, Ministry of Administration and Interior, Romanian Intelligence Service etc.).

These statistics do not take into account the financing type, their purpose being to provide information by economic activity according to CANE Rev.2.

Information corresponding to the financing type are administered by the Ministry of Public Finance, according to the stipulations of Urgency Government Ordinance no. 48/2005, with later completions and modifications.

4. Concepts and definitions

Gross nominal earnings comprise salaries, respectively rights in cash and in kind for employees for the work done (including for overtime) according to salary type, increases and indemnities as per cent of salary or in fixed amounts, other additions to salary according to the law, amounts paid for time not worked (indemnities for rest and study leaves, holidays and days off, amounts paid from salary fund for medical leaves), premiums, holiday bonuses and other amounts paid from salary fund according to normative documents and collective labour contracts, amounts paid from net profit and other funds (including equivalent value of meal tickets).

Net nominal earnings are obtained subtracting from gross nominal earnings the tax, contribution of employees for health social insurance, individual contribution of state social insurance and employee contribution to unemployment insurance budget.

Average monthly earnings represent the ratio between amount paid to employees by economic units in the reference month, irrespective of due period and average number of employees. Average number of employees represents an arithmetic mean calculated based on daily number of employees in the reference month. Number of employees taken into calculation includes only persons who were paid for that month. The employees in unpaid holiday, on strike, detached to work abroad and those whose labour contract/agreement was suspended are not taken into account.

Gross nominal earnings index is calculated as ratio between gross nominal earnings of current month and that of reference month, expressed in per cent.

Net nominal earnings index is calculated as ratio between net nominal earnings of current month and that of reference month expressed in per cent.

Real earnings index is calculated as ratio between net nominal earnings index and general consumer price index expressed in per cent.

Additional information can be obtained from the publication Monthly Statistical Bulletin no.10/2012.

Next press release will be issued on Friday, January 11, 2013.
